(a) step gating

$$\text{cost} \sum_i \frac{1}{s_i}$$

$$\text{precision} \prod_i \pi_i \geq e^{-\Sigma x_i}$$

(b) outcome gating

$$\text{cost} \frac{n}{s_o},\ s_o \geq (1-\rho)^n(1-\eta_o)$$

$$\text{precision} \frac{c(1-\eta_o)}{s_o},\ c = (1-\rho)^n$$
